

hw6: machine teaching for 1NN (continued)

April 5, 2023

1. Study the greedy algorithm in hw5 on the same two datasets. In particular, visualize the order of greedily selected teaching items. Explain why greedy picked the first few items the way it did. For this, you may need to monitor the value of all candidate items within an iteration.
2. Create a third dataset of your own. Run greedy teaching for 1NN on your dataset.
